

Application No. 10/581,185
Amdt. Dated March 7, 2011
Responsive to Office action of October 5, 2010

On a separate page, in the substitute specification, the following abstract has been added:

ABSTRACT OF THE DISCLOSURE

A heatable glass pane is disclosed. The glass pane includes two bus bars which are located parallel to a base edge of the glass pane and arranged essentially in a line in their axial directions, spaced apart a short distance from one another. The glass pane includes a set of heating wires which are in electrical contact with the two contact bus bars and the heating wires have essentially the same lengths.
